Claim Rejections - 35 USC § 103

Claims 1 is rejected under 35 U.S.C. § 103(a) as being unpatentable over Harper et al.

Harper discloses a gas turbine engine including a fuel purge system identical to that recited in claim 1. With reference to Harper's drawing figure, note that at the time of engine shutdown, control unit 94 opens valve 92 permitting air from compressed air source 82 to purge fuel lines and nozzles 52, 54, 68, etc., the purged fuel then being burned in the engine's combustors as described, for example, in column 4, lines 43-47.

It is further noted that Harper's gas turbine is not shown connected to an electric generator as recited in the present claims. Official notice is taken however of the fact that it is notoriously well known to use gas turbines to drive electric generators. Driving an electric generator with Harper's turbine would have thus been an obvious use of a known engine to perform its intended function by supplying power to a conventional load.

Allowable Subject Matter

Claims 2-13 contain allowable subject matter but are objected to as depending from rejected parent claims. If rewritten in independent form, these claims will be allowed.

Additional References

Davies et al is cited as disclosing a further example of a gas turbine engine having means to supply air to the engine's fuel system.
